

噪声传感器

Noise Sensor

CZ-037系列

噪声传感器CZ-037系列均采用单端压缩式压电转换元件，测量高声强噪声及非常低的压力波动，内部采取措施补偿了因振动而引起的误差，主要用于高声强外噪声测量。

性能指标

动态范围声压级：130~165dB

最大可测声压级不低于172dB

Noise sensor CZ - 037 series adopts single side of compression type piezoelectric conversion components to measure pressure fluctuations of the loud and very low noise.

Performance Index

The dynamic range of sound pressure level: 130~165dB

Measuring Sound pressure level should be no lower than 172dB
